## 1. INTRODUCTION

The Provincial Inflation Bulletin of Mpumalanga is a monthly publication of the Economic Analysis Division of the Provincial Treasury. The Bulletin is based on inflation data supplied by Statistics South Africa on a monthly basis. The purpose of the Bulletin is to provide an essential reference to Mpumalanga policy makers by providing the latest inflation data and analysis with specific reference to Mpumalanga.

It is essential to note that policy makers in Mpumalanga cannot directly influence provincial inflation, as it is the mandate of the South African Reserve Bank (SARB). However, as inflation is an impediment to provincial economic development, it is important to understand the inflation scenario in Mpumalanga. Shedding light on inflation in Mpumalanga should strengthen interventions against the triple economic challenges.

## 2. KEY FINDINGS

- The national headline CPI (for all urban areas) annual inflation rate in June 2015 was 4.7 per cent. This rate was 0.1 of a percentage point higher than the corresponding annual rate of 4.6 per cent in May 2015.
- Mpumalanga's inflation rate of 4.5 per cent in June 2015 was 0.3 of a percentage point higher than the corresponding annual rate of 4.2 per cent in May 2015.
- Mpumalanga recorded the fourth lowest annual inflation rate among the nine provinces. It was also lower than the national headline inflation rate for the fourth consecutive month.
- The Mpumalanga inflation rate was lower than the upper limit of the inflation target zone of 6 per cent for the tenth consecutive month.
- Witbank/Nelspruit<sup>1</sup> (4.7 per cent), recorded the joint seventh lowest inflation rate among the thirteen major urban areas of South Africa in June 2015.
- The housing and utilities index accounted for 21.7 per cent of the average price increase in Mpumalanga during June 2015. The MGS as well as the FNAB indices accounted for 20.2 per cent and 19.2 per cent, respectively.
- When the impacts of the more volatile food and non-alcoholic beverages prices as well as that of petrol and electricity are excluded from the consumer price index, the underlying core inflation in Mpumalanga would have amounted to 5.1 per cent in June 2015.

---

### **3. NATIONAL INFLATION SCENARIO**

The national average annual inflation rate for 2014 was 6.1 per cent. This average annual inflation rate of 6.1 per cent was 0.4 of a percentage point higher than the corresponding average annual inflation rate of 5.7 per cent for the year 2013. The national headline CPI (for all urban areas) annual inflation rate in June 2015 was 4.7 per cent. This rate was 0.1 of a percentage point higher than the corresponding annual rate of 4.6 per cent in May 2015.

Among the 12 group indices, the annual inflation rate of alcoholic beverages and tobacco (9.7 per cent), education (9.3 per cent), miscellaneous goods and services (7.2 per cent), restaurants and hotels (6.1 per cent), health (6.0 per cent), clothing and footwear (5.6 per cent) as well as housing and utilities (5.4 per cent) were higher than the national rate of 4.7 per cent.

The annual inflation rates of food and non-alcoholic beverages (4.3 per cent), household contents and services (2.3 per cent), recreation and culture (2.0 per cent), transport (0.7 per cent) as well as communication (-0.4 per cent) were lower than the national rate. The annual increases of these four indices were also below the upper limit of the inflation target zone of 6 per cent.

### **4. PROVINCIAL INFLATION COMPARISON**

The comparative year-on-year percentage change in the CPI for South Africa and the nine provinces since 2010, as reported by Statistics South Africa, are displayed in Figure 1. The provinces with an annual inflation rate lower than the headline inflation in June 2015 were Eastern Cape (4.6 per cent), Northern Cape (4.6 per cent), Gauteng (4.6 per cent), Mpumalanga (4.5 per cent), North West (4.0 per cent), Limpopo (4.0 per cent) and KwaZulu-Natal (3.9 per cent). The provinces with an annual inflation rate higher than the national headline inflation were Western Cape (5.1 per cent) and Free State (4.9 per cent).

Mpumalanga's inflation rate rose by 0.3 of a percentage point from 4.2 per cent in May 2015 to 4.5 per cent in June 2015. Mpumalanga recorded the fourth lowest inflation measurement among the nine provinces in June 2015. In June 2015, Mpumalanga's inflation rate was lower than the national inflation rate for the fourth consecutive month and below the upper limit of the inflation target zone for the tenth consecutive month.

## 5. MPUMALANGA'S INFLATION SCENARIO

Mpumalanga's average annual inflation rate for 2014 was 5.8 per cent, which was lower than the average for South Africa (6.1 per cent) as well as the lowest overall. In June 2015, Mpumalanga recorded the fourth lowest inflation measurement of 4.5 per cent among the provinces. The comparative percentage change in the CPI for South Africa and Mpumalanga from January 2003 to June 2015 is displayed in Figure 2.

The 2014 average annual inflation rate for Witbank/Nelspruit<sup>1</sup> was 5.4 per cent, which was the lowest of the thirteen urban areas. The inflation measurement for Witbank/Nelspruit<sup>1</sup> was 4.7 per cent in June 2015, 0.3 of a percentage point higher than the May 2015 measurement of 4.4 per cent, however, still below the upper limit of the inflation target zone. Witbank/Nelspruit<sup>1</sup> recorded the joint seventh lowest inflation measurement in June 2015, which was equal to the national inflation rate but higher than the provincial inflation rate for June 2015.

Statistics South Africa introduced a new basket and weights for the CPI in its January 2013 publication. The new basket and weights are based on the *2010/11 Income and Expenditure Survey*. The new basket has higher weights than the previous basket for alcoholic beverages and tobacco, clothing and footwear, housing and utilities, health, recreation and culture as well as restaurants and hotels. The weights for food and non-

alcoholic beverages (FNAB), household contents and services, transport, communication, education as well as miscellaneous goods and services (MGS) are lower in the new basket.

**Figure 2: CPI in South Africa and Mpumalanga, 2003–2015**

**Source: Statistics South Africa – CPI, 2003-2015**

The main determinants of inflation in Mpumalanga based on their respective weightings, as provided in Table 1, are price changes in FNAB, housing and utilities, transport as well as MGS. These four indices, in terms of the weighting, contribute more than 70 per cent to the level of inflation and inflation movements in Mpumalanga.

It appears from Table 1 that the housing and utilities index was accountable for 21.7 per cent of the average price increase in Mpumalanga during June 2015. The MGS as well as the FNAB indices were accountable for 20.2 per cent and 19.2 per cent, respectively. The transport index contributed only 1.7 per cent. The alcoholic beverages and tobacco index made a considerable contribution of 13.9 per cent compared with its weighting of 4.8 per cent.

Within the housing and utilities index, price increases in owners' equivalent rent and electricity provided the most upward momentum. Insurance drove the MGS average price levels higher, while meat provided most of the increase in the FNAB index.

**Table 1: Mpumalanga's CPI group indices, weights, percentage change & contribution to inflation, June 2015**

Index description	Weight	Percentage change		Estimated contribution to inflation
		Month-on-month	Year-on-year	
Food & non-alcoholic beverages	20.72	-0.3	+4.1	19.2%
Alcoholic beverages and tobacco	4.81	+0.8	+12.8	13.9%
Clothing and footwear	5.36	+0.6	+8.8	10.7%
Housing and utilities	21.37	+0.6	+4.5	21.7%
Household contents and services	5.75	+0.8	+3.3	4.3%
Health	1.38	+1.4	+7.5	2.3%
Transport	14.88	+1.3	+0.5	1.7%
Communication	2.25	-0.1	-1.2	-0.6%
Recreation and culture	6.20	+0.3	+0.5	0.7%
Education	1.58	+0.0	+8.2	2.9%
Restaurants and hotels	2.56	+1.0	+5.1	3.0%
Miscellaneous goods and services	13.14	-0.1	+6.8	20.2%
All items	100.0	+0.4	+4.5	100.0%

**Source: Statistics South Africa – CPI Additional Tables, 2015**

When the impact of the more volatile FNAB and petrol prices are excluded from the consumer price index as in Figure 3, the underlying annual inflation amounted to 5.2 per cent in June 2015. If electricity prices are also excluded from the calculation of headline CPI inflation, the resultant core inflation would have been at 5.1 per cent in June 2015.

## 6. CONCLUSION

Mpumalanga registered the fourth lowest inflation rate of 4.5 per cent in June 2015, which was lower than the national headline inflation rate (4.7 per cent). Mpumalanga's inflation

rate was lower than the upper limit of the inflation target zone for the tenth consecutive month.

Inflation reached its low during the first quarter of 2015 and is now expected to continue its upward trend this year with July being particularly significant as the new electricity prices will be included in the inflation numbers. Other factors that will contribute to higher inflation include the impact of the anticipated weaker rand dollar exchange rate on food and petrol prices.

The Monetary Policy Committee (MPC) announced at the conclusion of its July meeting that the SARB's national inflation forecast have been revised higher. The forecast for 2015 was increased marginally to 5.0 per cent, compared with the previous forecast of 4.9 per cent. The forecast for 2016 and 2017 was unchanged at 6.1 per cent and 5.7 per cent, respectively.
